Introduction:

The CSBF manual compound valve is three tubing crosses cross valve integrated with a safety valve and a diverter valve. The valve has the pressure compensation, current capacity, proportional control and Safekeeping Security. The operation handle of the valve and the current capacity adjusting mechanism are working synchronously, and can carry on the limitless speed changing. This valve also has the good commutation velocity modulation performance, long life-span, controlling easily, reliable capacity**,** and widely used in the ships machinery and other kinds of mechanical hydraulic system.

Technical Data:

Model	Nominal diameter(mm)	Nominal flow(l/min)	Nominal pressure(Mpa)	Scope of safety value pressure(Mpa)	Handle control force(N)	Mid-position pull engine ry
CSBF - G20	20	120	25	5~25	≤40	MOYHKP
CSBF - G25	25	200				
CSBF - G32	32	300

Replacement notice

When replacing the old marine CSBF manual compound valve, due to the corrosion of nameplate and other factors, it may be difficult to clearly determine the type .At this time, you can infer it by measuring the center distance of the pipeline mounting holes (as shown in the figure below).

G15=35mm
G20=40mm
G25=50mm
G32=60mm
G40=66mm
G50=80mm
G60=90mm
