Description:

The FC(Y) series water-cooled heat exchanger adopts a finned heat exchanger with a traditional structure and a new foreign technology design. The small product is a fixed tube plate structure, model FC;

The large product is a mobile tube plate structure, model FCY.

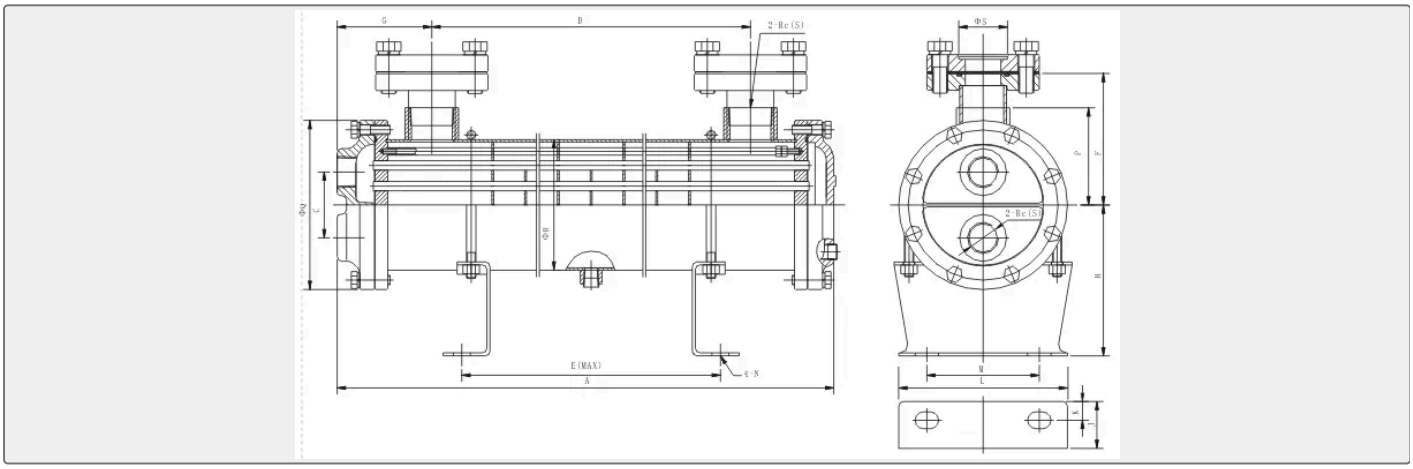

The heat transfer tube uses a copper tube to roll out the heat fins. The heat transfer area is large, and the product is small in size and light in weight. Suitable for cooling of low viscosity and relatively clean oil; can be applied to plastic machinery, hydraulic setting

Preparation, air compressor, oil slick system, fluid coupling, power equipment and other industries.

The series of medium and large products adopts a movable tube plate structure, which can be disassembled for cleaning and repair;

This series of products can be designed and manufactured according to customer requirements from small to medium to large scale, covering a wide range.
