BK-150 Series Marine Control Transformer:

1、 Purpose

The control transformer of this series (hereinafter referred to as transformer) is applied to frequency of AC 50~60 Hz and circuit of 500V; it is often used as machine-tool control apparatus or power transformer for local lighting, and also can be used as small power transformer using for various electric equipment.

2、 Service conditions

- I A height above sea-level not exceeding 1000m;
- I A temperature of ambient air not below -25℃ and not above +45℃ ;
- I Relative air humidity: ordinary type ≤85℃, damp and hot type ≤95℃;
- I In medium without risk of explosion and with too insufficient air and electric insulation dust to corrode metal and damage insulation;
- I In environment without water vapor and equipped with rainproof device.

3、 Structure

The single-phase multi-winding shell-type transformers is used as BK series control transformer, the main structure is shown as follows: Picture

I Shell-type is used as iron core, which is laminated;

I winding can be two-winding or multi-winding.

Basic parameters:

Type	Rated power (VA)	Primary rated voltage (V)	Secondary rated voltage (V)
