China Quick Closing Valve Control System:

Closing speed valve control system is a ship of the fuel tank, oil fuel tanks or daily use counters to implement the remote control to operate pneumatic valves turn off circuit to cut off, in the fire emergency, effective in preventing the spread of fire. To avoid heavy losses.

How to Work

On board gas source input speed closed pneumatic valve control box of the cylinder, the cylinder air pressure through the pressure controller to maintain a constant value. After the air cylinder distributor must be divided into several routes. In case of emergency, quickly open compressed air and move the piston of rapidly turn off the pneumatic valve.
